EDUCATION

University of South Florida, Tampa, FL, USA — Expected May 2027
M.S. in FinTech · GPA: [Pending] / 4.00

Sungkyunkwan University, South Korea — Expected 2027
M.S. in FinTech · GPA: 4.00 / 4.00

Yonsei University, South Korea — February 2024
B.Eng. in Bioengineering

RESEARCH INTERESTS

AI/Machine Learning · FinTech · Financial Text Analysis
Market Microstructure · Asset Pricing · Derivatives

SKILLS

Technical Skills: Python, R, SQL, Polars, Apache Arrow, Git, Quarto
Financial Databases: CRSP, Compustat, WRDS
Languages: Korean (Native), English ([Proficiency to confirm])

RESEARCH EXPERIENCE

Inquiry Disclosures, Corporate Responses, and Stock Price Delay: Generative AI-Based Text Analysis
Sungkyunkwan University · Advisor: Prof. Daejin Kim

- Examined the relationships between inquiry disclosure frequency, firms' initial response characteristics, and stock price delay in the Korean stock market.
- Developed a GPT-4.1-based measure of disclosure informativeness by evaluating the clarity and specificity of firms' responses to market rumors and news reports.
- Conducted firm-year regression analyses and found that more informative responses were associated with lower stock price delay.

Research Assistant: Machine Learning-Based Portfolio Construction
Sungkyunkwan University · Advisor: Prof. Daejin Kim

- Investigated tree-based machine learning algorithms for portfolio construction using firm characteristics.
- Evaluated tree-based portfolios against conventional sorting methods using risk-adjusted performance and asset pricing metrics.

SELECTED RESEARCH PROJECTS

Empirical Asset Pricing Replication University of South Florida
Independent Study · Supervisor: Prof. Matthew G. Son

- Replicated selected empirical analyses from *Empirical Asset Pricing: The Cross Section of Stock Returns* (Bali, Engle, and Murray).
- Constructed stock characteristics from CRSP and Compustat data and examined their empirical properties.
- Used R and Python for financial data processing and empirical analysis.

Institutional Shareholder Activism and Credit Rating Prediction Sungkyunkwan University
Research Project

- Conducted an empirical analysis of the relationship between institutional shareholder voting and corporate credit rating changes using financial and governance data.
- Implemented machine learning models and data augmentation techniques (SMOTE and CTGAN) to assess the predictive contribution of shareholder voting information.

Algorithmic Trading Infrastructure Independent Project

- Worked on server connectivity and infrastructure for algorithmic trading applications.

AWARDS & SCHOLARSHIPS

BK21 Research Encouragement Scholarship — Sungkyunkwan University November 2024
BK21 Research Support [official title to be confirmed] March 2024 – February 2026
Ministry of Education / National Research Foundation of Korea
Jinri Scholarship (Academic Excellence) — Yonsei University February 2021, August 2020
